GRADE 7 · UNIT 1 · MAD LIBS

Mad Libs Planner

NAME _____ **DATE** _____

> Plan your Mad Lib on paper first.

1. Pick four kinds of words

Ideas: noun, verb, adjective, place, animal, food, number, name, body part. Write one in each box.

WORD 1	WORD 2	WORD 3	WORD 4

The word in each box is also your **variable name**. Two words? Join them with an underscore, like `body_part`.

2. Write your story

Write 3 to 5 sentences. Where the player's word goes, write the box word in curly braces, like this: *The {adjective} {animal} ate my {food}.*

3. Turn it into code

Fill in the blanks. Each `input()` line asks for one word from your boxes. Each `print()` line is one sentence of your story, copied exactly, curly braces and all.

```
# My story is about _____________________________________

# I will ask the player for: _____________________________

_____________ = input("_____________: ")

_____________ = input("_____________: ")

_____________ = input("_____________: ")

_____________ = input("_____________: ")

print(f"_____________________________________________________")

print(f"_____________________________________________________")

print(f"_____________________________________________________")

print(f"_____________________________________________________")
```

Check: every word in `{ }` matches a variable name on the left side exactly. Don't forget the `f` before the quote.

4. Test it twice

WORDS I TYPED	WHAT WENT WRONG? (OR "NOTHING!")
