Rock Paper Scissors Planner

NAME _____ DATE _____

> Plan your game on paper first. Then the code is mostly copying from this page.

1. Who wins?

Rock beats scissors. Scissors beats paper. Paper beats rock. In this game, the computer always picks rock.

YOU PICK	COMPUTER	WHO WINS?
rock	rock	
paper	rock	
scissors	rock	

2. Name your variables

Use clear names, like `player_choice`, not `x`.

PLAYER'S CHOICE	COMPUTER'S CHOICE

3. Write your messages

Tie: _____

Player wins: _____

Computer wins: _____

4. Turn it into code

Fill in the blanks. Use your variable names from the boxes. Each `print()` is one message from section 3, copied exactly. Tell the player to type in lowercase.

```
_____ = input("_____: ")
_____ = "rock"

if _____ == _____:
    print("_____")
elif _____ == "_____":
    print("_____")
else:
    print("_____")
```

Check: each variable name is spelled the same every time. Every `if` and `elif` line ends with a colon.

5. Test it three times

I TYPED	WHAT PRINTED	DID IT MATCH MY PLAN?
rock		
paper		
scissors
