Unit 2 Review

Every block on this sheet is one you have used in Unit 2. Look here when you forget how a block works, then use it your own way. Test like a player: when something breaks, change one thing, then run the same test again.

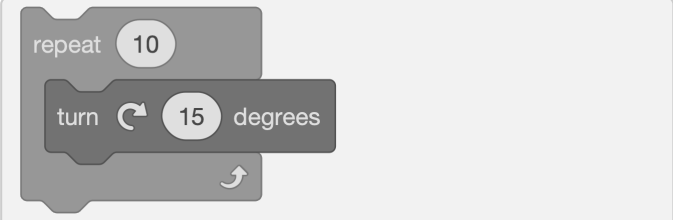

1. Send a message with broadcast

`broadcast` sends a message to every sprite. Each `when I receive` with that message starts at the same moment.

2. Repeat loop

A `repeat` loop runs the blocks inside it that many times, then the script moves on.

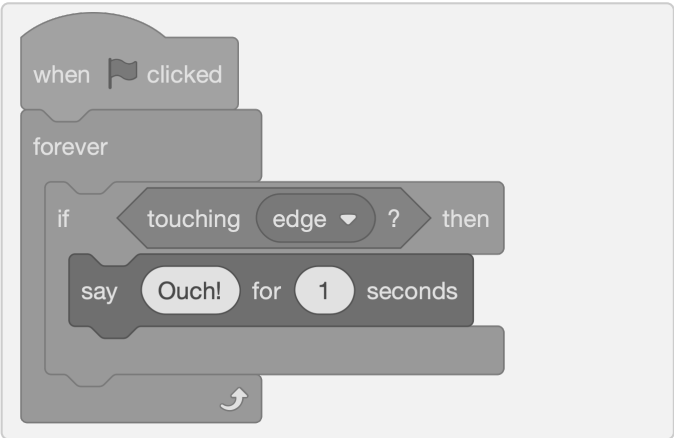

3. Forever loop

A `forever` loop keeps running until you click the stop sign. Most games have one.

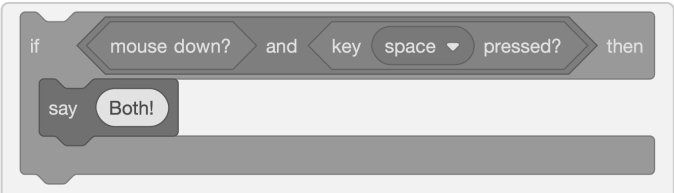

4. Keep checking with forever and if

An `if` checks only once, when the script reaches it. Put it inside a `forever` loop so it keeps checking.

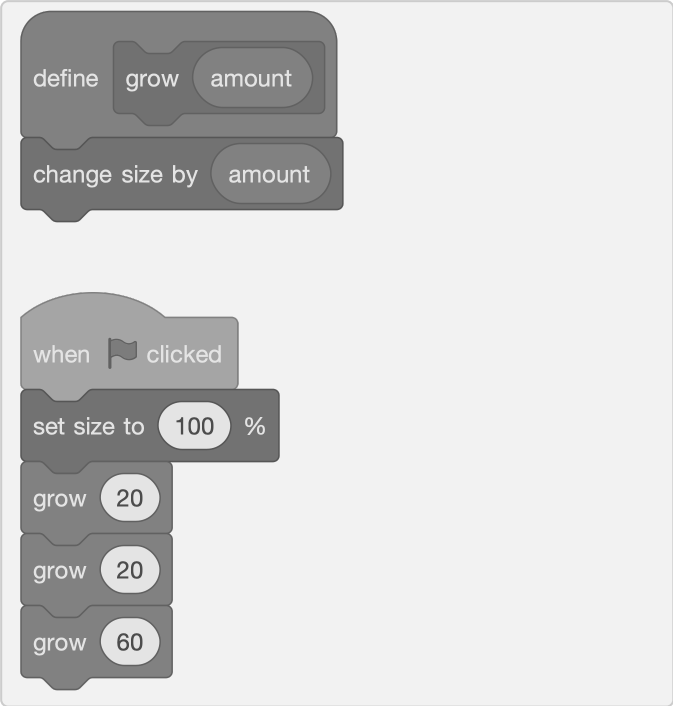

5. Two checks at once: and, or

`and` is true only when both checks are true. `or` is true when either one is.

6. Make your own block

A custom block (in My Blocks) runs a group of blocks under one name. The `define` hat holds what it does. The input, `amount`, can be different each time you call it.

7. Make a variable and set it

A variable holds a value that can change, like a score. Set it when the green flag is clicked, so every game starts fresh.

8. Change a variable

`change by` adds to the value. A negative number, like -1, takes some away. Change the score once, at the moment a point is earned.

9. End the game

`stop [all]` stops every script. You can also show the ending with `say` or a new backdrop.
