Turtle Art Gallery Planner

NAME _____ **DATE** _____

> Plan your picture on paper first.

1. Sketch your picture

Draw two or more separate pieces. Put a dot where each piece starts, and write its (x, y) and its color beside it. (0, 0) is the middle. x goes left and right, y goes up and down.

MY PICTURE

2. Find the part that repeats

Pick one piece that repeats, like the petals of a flower. Circle one copy of it in your sketch.

One copy is: _____

It repeats this many times: _____

3. Turn it into code

Your `main.py` already has `import turtle` and `turtle.done()`. Write your code between them. The loop body draws **one copy**, and `range()` is your number from section 2.

```
# Piece 1: _____________________________
turtle.penup()
turtle.goto(______, ______)
turtle.pendown()
turtle.color("_______________")
for i in range(______):
    turtle._____________(______)
    turtle._____________(______)
    turtle._____________(______)
```

Start your next piece the same way: pen up, `goto`, pen down.

Check: the lines that repeat are indented under the `for`. Pen up, `goto` and pen down are not indented, so they stay out of the loop.

4. Test it three times

Click **Open Graphics** first, then **Run**.

I CHECKED	WHAT I SAW	DID IT MATCH MY PLAN?
The repeating part repeats the right number of times		
Each piece starts where I planned		
The terminal shows no error
